

# What is ProFuturo Observatory?

It is the R&D element of ProFuturo education programme:

The Observatory analyses, explains and contemplates not only the state of digital education in vulnerable environments but also the challenges it faces.

The Observatory uses debate and contemplation as working tools:

Through these tools, the ProFuturo Observatory seeks to be an international benchmark in research on reality diagnostics and on social and educational trends.

The Observatory addresses both the educational community and agents in the area of social intervention:

Through posts, interviews and surveys, it seeks to attract the attention of the global educational community.

The Observatory has a global and comprehensive vision:

It empowers networking by collaborating with other existing nodes of educational innovation.
